

Wacker

- Weight of the engine above the cutting shaft keeps the blade down during cutting and provides stable straight cut; no need for pushing the machine down.
- Cutting depth crank handle easily approachable to end user for blade upward and downward movement.
- Features such as parking brake, emergency cut off switch on engine and the lifting hooks, makes it the most efficient machine.

Application:

These cutters are used majorly cutting applications on concrete and asphalt surfaces. Also widely used in patching and repair work

Wacker Neuson- Germany; Premium quality asphalt/concrete cutting machines that lasts for years. Mostly used for various concrete and asphalt applications.
